Hardware connection schematic diagram

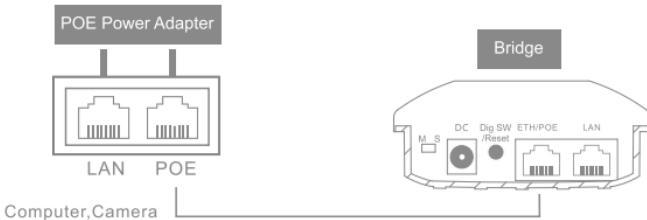

2.4G Bridge

5.8G Bridge (1)

5.8G Bridge (2)

Interface Descriptions

DIP Switch: To adjust the transformation between the main AP mode and the secondary AP mode of the bridge.

DC: Power interface, 12V 1A DC power interface.

Digital Switch/Reset: Both digital switch and reset button, short press the button when electrifying, the numeric value of the digital tube will be added one and press 15 seconds, the device will be restored to the factory setting.

2.4G Bridge

LAN1/POE: This is a data transmission port, and it is also a power port. When the device works in the bridge mode, the interface acts as a LAN port function. When the device works in the route mode, the interface acts as a WAN port function. This interface is used to connect the POE interface to the POE power.

LAN2: This is a LAN data transmission port which can connect computers, cameras, switches and other devices.

5.8G Bridge

ETH/ POE interface: This is a data transmission port, and it is also a power port. When the device works in the bridge mode, the interface acts as a LAN port function. When the device works in the route mode, the interface acts as a WAN port function. This interface is used to connect the POE interface to the POE power.

COM: It is a debugging interface.

Indicator light state description

2.4G Bridge

SIG1,SIG2 SIG3,SIG4	Signal indicator: Master AP: Output power indicator lamp. When the output power is less than 17dbm, the SIG1 light lit, the output power is between 17~19dbm, the SIG1-SIG2 lights lit, the output power is between 20~22dbm, the SIG1-SIG3 lights lit, the output power is at 23dbm and above, the SIG1 to SIG4 lights lit. Subordinate AP: Signal connection intensity indicator Running flowing water light when connection fails. When the connection is successful and the signal intensity in the range of 0~65dbm, the SIG1 to SIG4 lights lit, the signal intensity in the -66~-75dbm, the SIG1 to SIG3 lights lit, the signal intensity in -76~-85dbm, the SIG1 to SIG2 lights lit, the signal intensity in the -85dnm and below, the SIG1 light lit.
LAN1/LAN2	Port state indicator lamp: When the wire is connected, it is always bright and goes out when it is broken
	The lights flicker when the bridge is running normally.
	Power indicator lamp When the power is electrified, the lamp is always bright and goes out when it is broken.
	Digital tube indicator lamp Short press "digital switch / reset" button, each digital tube value will add one (0-9-A-F cycle).

5.8G Bridge

SIG1,SIG2 SIG3,SIG4	Signal indicator: Master AP: Output power indicator lamp. When the output power is between 3~9dbm , the SIG1 light lit, the output power is between 10~16dbm, the SIG1-SIG2 lights lit, the output power is between 20~22dbm, the SIG1-SIG3 lights lit, the output power is at 23dbm and above, the SIG1 to SIG4 lights lit. Subordinate AP: Signal connection intensity indicator Running flowing water light when connection fails. When the connection is successful and the signal intensity in the range of 0~65dbm, the SIG1 to SIG4 lights lit, the signal intensity in the -66~-75dbm, the SIG1 to SIG3 lights lit, the signal intensity in -76~-85dbm, the SIG1 to SIG2 lights lit, the signal intensity in the -85dbm and below, the SIG1 light lit.
ETH	Port state indicator lamp: When the wire is connected, it is always bright and goes out when it is broken
	Power indicator lamp: When the power is electrified, the lamp is always bright and goes out when it is broken.
	Digital tube indicator lamp : Short press "Digital switch / reset" button, each digital tube value will add one (0-9-A-F cycle).

Fast pairing of digital switch

One to one pairing method

1. Dial a bridge to "M" and another bridge to "S".
2. Short press "Dig SW/ Reset" button, each digital tube value will add one (0-9-A-F cycle).
3. The paired bridge is set to the same value and can be paired successfully.

One to multiple pairing method

1. Dial a bridge to "M" and the other bridge to "S".
2. Short press "Dig SW/ Reset" button, each digital tube value will add one (0-9-A-F cycle).
3. The paired bridge is set to the same value and can be paired successfully.

Digital tube and wireless channel comparison table

2.4G Bridge

Value	0	1	2	3	4	5	6	7	8	9	A	b	C
Channel	1	2	3	4	5	6	7	8	9	10	11	28	32

5.8G Bridge

Value	0	1	2	3	4	5	6	7	8	9	A	b	C	d	E	F
Channel	36	40	44	48	52	56	60	64	149	153	157	161	182	186	190	194

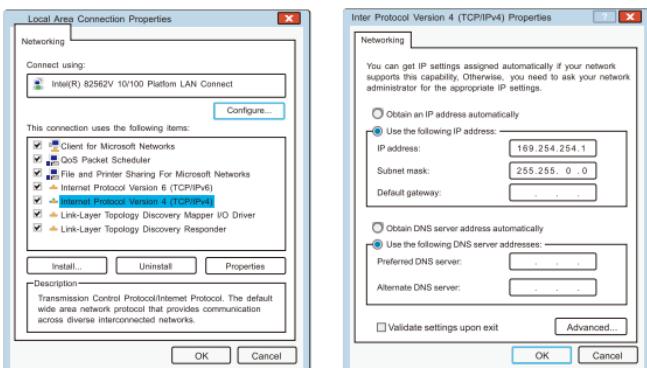

Note:

1. The default channel bandwidth of the wireless bridge is 40MHz;
2. The number of channels supported by some wireless bridges will vary. Please refer to the actual product.

Setting up a bridge in a browser

Computer settings

1. Open the computer--Right click [Internet] – [Attribute] – [Change adapter settings].
2. Right click of the mouse click [Local connection], Select [Attribute]
3. Double-click the [Internet protocol version 4 (TCP/IPv4)] in the connection properties dialog box project(as show in the left below).
4. In the [Internet protocol version 4] dialog box, choose [use the following IP address] and set the IP address to 169.254.254.X (X is any number between 1-253), and the subnet mask is set to 255.0.0.0 (as show in the right below). Finally, click [OK] and quit.

Login management interface

The default mode of the device is the bridge mode, open the computer browsers, after entering its address 169.254.254.254, the bridge device list will be displayed, and clicks on the [login] button to log in to the device.

Note: Some wireless bridges do not have “Bridge Device list” function. Please refer to the actual product for details.

Bridge Device List						[Global/中文]
ID	MAC	IP address	Wireless mode	Status	Operate	
1	18:40:44:00:00:02	169.254.254.111	Server Mode	Online	Login	

The username and password of the web management platform are all **admin**, click the [login] button to log in to the device.

Web Management Platform [Global/中文]

DNS2:

Description: The device supports bridge mode and route mode in the "M" AP mode, but only support the bridge mode in the "S" AP mode.

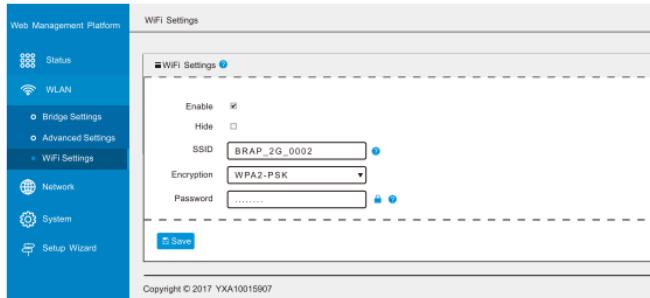

Wifi settings

Note: Some wireless bridges do not have this function. Please refer to the actual product for details.

The default WiFi name of the 2.4G Bridge is Brap-2G-XXXX, the password is 88888888.

The default WiFi name of the 5.8G Bridge is Brap-5G-XXXX the password is 88888888.

Computers, mobile phones, and other terminals can be wirelessly connected to the device through this signal. Remarks XXXX is the last four bits of the bridge's MAC address x

Description: The device launches the WiFi signal in the main AP mode. In the secondary AP mode, the WiFi signal is transmitted only after the bridge pairing is successfully connected.

Bound cloud end

Note: Some wireless bridges do not have this function. Please refer to the actual product for details.

If the device is connected to the Internet, you can configure the 【bridge interface】 information. After the device is connected to the Internet, it can be remotely managed by the cloud.

1. Login "www.tianwifi.net" to apply for a cloud account.
2. Fill in your cloud account in the "username" column.
3. The server address bar is filled in "www.tianwifi.net"
4. The device description bar suggests filling up the installation location for later management.

Click the 【Save】 button, prompting the 'connection state: Connected to www.tianwifi.net', which indicates that the device has successfully bound the cloud

Schnittstellenbeschreibungen

DIP-Schalter: Zum Einstellen der Transformation zwischen dem Haupt-AP-Modus und dem sekundären AP-Modus der Bridge.

DC: Stromschnittstelle, 12 V 1 A ADC-Stromschnittstelle.

Digitaler Schalter/Reset: Sowohl digitaler Schalter als auch Reset-Taste, drücken Sie kurz die Taste beim Elektrifizieren, der numerische Wert der digitalen Röhre wird eins addiert und 15 Sekunden drücken, das Gerät wird auf die Werkseinstellung zurückgesetzt. Schnelle Kopplung des

DigitalschaltersEins-zu-Eins-Pairing-Methode

1. Wählen Sie eine Brücke zu „M“ und eine andere Brücke zu „S“.
2. Drücken Sie kurz die Taste „Dig SW/Reset“, jeder digitale Röhrenwert addiert eins (0-9-A-F-Zyklus).
3. Die gekoppelte Bridge ist auf denselben Wert eingestellt und kann erfolgreich gekoppelt werden.

Eins-zu-Mehrfach-Pairing-Methode

1. Wählen Sie eine Brücke auf „M“ und die andere Brücke auf „S“.
2. Drücken Sie kurz die Taste „Dig SW/Reset“, jeder digitale Röhrenwert addiert eins (0-9-A-F-Zyklus).
3. Die gekoppelte Bridge ist auf denselben Wert eingestellt und kann

Vergleichstabelle für digitale Röhren und drahtlose Kanäle

2.4G-Brücke

Wert	0	1	2	3	4	5	6	7	8	9	A	b	C
Kanal	1	2	3	4	5	6	7	8	9	10	11	28	32

5.8G-Brücke

Wert	0	1	2	3	4	5	6	7	8	9	A	b	C	d	E	F
Kanal	36	40	44	48	52	56	60	64	149	153	157	161	182	186	190	194

Notiz:

1. Die Standard-Kanalbandbreite der Wireless Bridge beträgt 40 MHZ;
2. Die Anzahl der von einigen drahtlosen Bridges unterstützten Kanäle ist unterschiedlich. Bitte beziehen Sie sich auf das tatsächliche Produkt.

Accoppiamento rapido dell'interruttore digitale

Metodo di abbinamento uno a uno

1. Comporre un ponte su "M" e un altro ponte su "S".
2. premere premere il pulsante "Dig SW/Reset", ogni valore del tubo digitale ne aggiungerà uno (ciclo 0-9-A-F).
3. Il bridge accoppiato è impostato sullo stesso valore e può essere accoppiato correttamente.

Metodo di accoppiamento da uno a più

1. Comporre un ponte su "M" e l'altro ponte su "S".
2. premere premere il pulsante "Dig SW/Reset", ogni valore del tubo digitale ne aggiungerà uno (ciclo 0-9-A-F).
3. Il bridge accoppiato è impostato sullo stesso valore e può essere accoppiato correttamente.

Tabella di confronto dei canali digitali e wireless

Ponte 2.4G

Valore	0	1	2	3	4	5	6	7	8	9	A	b	C
Canale	1	2	3	4	5	6	7	8	9	10	11	28	32

Ponte 5.8G

Valore	0	1	2	3	4	5	6	7	8	9	A	b	C	d	E	F
Canale	36	40	44	48	52	56	60	64	149	153	157	161	182	186	190	194

Nota:

1. La larghezza di banda del canale predefinita del bridge wireless è 40 MHZ;
2. Il numero di canali supportati da alcuni bridge wireless varia. Si prega di fare riferimento al prodotto reale.

Appariement rapide du commutateur numérique

Méthode d'appariement un à un

1. Composez un pont sur "M" et un autre pont sur "S".
2. Appuyez brièvement sur le bouton "Dig SW/Reset", chaque valeur de tube numérique en ajoutera un (cycle 0-9-A-F).
3. Le pont jumelé est réglé sur la même valeur et peut être jumelé avec succès.

Méthode d'appariement un à plusieurs

1. Composez un pont sur "M" et l'autre pont sur "S".
2. Appuyez brièvement sur le bouton "Dig SW/Reset", chaque valeur de tube numérique en ajoutera un (cycle 0-9-A-F).
3. Le pont jumelé est réglé sur la même valeur et peut être jumelé avec succès.

Tableau de comparaison des tubes numériques et des canaux sans fil

Pont 2.4G

Évaluer	0	1	2	3	4	5	6	7	8	9	A	b	C
Canaliser	1	2	3	4	5	6	7	8	9	10	11	28	32

Pont 5.8G

Évaluer	0	1	2	3	4	5	6	7	8	9	A	b	C	d	E	F
Canaliser	36	40	44	48	52	56	60	64	149	153	157	161	182	186	190	194

Noter:

1. La bande passante par défaut du canal du pont sans fil est de 40 MHZ ;
2. Le nombre de canaux pris en charge par certains ponts sans fil varie. Veuillez vous référer au produit réel.

Emparejamiento rápido del interruptor digital

Método de emparejamiento uno a uno

1. Marque un puente a "M" y otro puente a "S".
2. Presione brevemente el botón "Dig SW/Reset", cada valor de tubo digital agregará uno (ciclo 0-9-A-F).
3. El puente emparejado se establece en el mismo valor y se puede emparejar con éxito.

Método de emparejamiento uno a múltiple

1. Marque un puente a "M" y el otro puente a "S".
2. Presione brevemente el botón "Dig SW/Reset", cada valor de tubo digital agregará uno (ciclo 0-9-A-F).
3. El puente emparejado se establece en el mismo valor y se puede emparejar con éxito.

Tabla comparativa de tubos digitales y canales inalámbricos

Puente 2.4G

Valor	0	1	2	3	4	5	6	7	8	9	A	b	C
Canal	1	2	3	4	5	6	7	8	9	10	11	28	32

Puente 5.8G

Valor	0	1	2	3	4	5	6	7	8	9	A	b	C	d	E	F
Canal	36	40	44	48	52	56	60	64	149	153	157	161	182	186	190	194

Nota:

1. El ancho de banda del canal predeterminado del puente inalámbrico es de 40 MHZ;
2. La cantidad de canales admitidos por algunos puentes inalámbricos variará. Consulte el producto real.
